Subject: Application for the Position of Game Developer & Interactive Environments Designer

Dear Hiring Team at Innovatech Studios,

I am writing to formally submit my **application** for the role of **Game Developer and Interactive Environments Designer** at your organisation. Having followed Innovatech Studios' work closely, I am confident that my academic background and hands-on technical skills make me a strong candidate for this position. Beyond game development, I also bring a solid foundation in software engineering — a cross-disciplinary perspective I believe adds genuine value to any interactive project.

I am currently pursuing a degree in **Software Engineering** at the Universidad Cooperativa de Colombia, while concurrently completing a **Technology Programme in Video Game Development**. This dual academic path has equipped me with a well-rounded skill set that bridges software architecture and interactive design. My core technical competencies include object-oriented programming, algorithm design, and game development using industry-standard engines such as *Unity* and *Unreal Engine*. I am proficient in C#, Python, and C++, and I have solid working knowledge of version control with Git, UI/UX design principles applied to gaming environments, and agile project management using Scrum methodologies.

Although I have less than a year of formal industry experience, I have been actively involved in academic and independent development projects that have sharpened my ability to build functional game prototypes, implement gameplay mechanics, and integrate 3D assets into interactive environments. My concurrent training in software engineering further allows me to approach game development with a structured, scalable mindset — something I see as a natural extension I can bring to your pipeline, whether in a pure game dev capacity or in close collaboration with your engineering team. I thrive in creative, collaborative settings and am genuinely passionate about crafting immersive digital experiences that push technical limits.

I have attached my updated CV to this email, which provides a more detailed overview of my academic record, technical projects, and relevant experience. Should you wish to discuss my

application further, please do not hesitate to reach me at **+57 313 662 4954** or via email at **jenifer.urbano@campusucc.edu.com**. I am available for an interview at your earliest convenience and would welcome the opportunity to speak with you in person.

Thank you sincerely for taking the time to consider my application. I look forward to the possibility of joining Innovatech Studios and contributing to the exciting work your team does every day.

Yours sincerely,

Jenifer Daniela Urbano Córdoba
